FROM QUINTESSENCE

Antonio H.C. Rodrigues

This book presents clinical guidelines for planning treatments in restorative dentistry and outlines a clear, objective, and simple thinking process that can be easily applied in daily practice, essentially providing the reader with a roadmap to be used as a reference from the very initial procedures until final restorative treatment. Part 1 describes how to identify existing problems by gathering, organizing, and analyzing information obtained during clinical examination. Part 2 focuses on providing solutions to identified problems via restorative treatment options, highlighting the use of implant-supported restorations in the treatment of both partially and completely edentulous arches. Part 3 details how to present treatment options to the patient and includes aspects related to patient education, treatment plan presentation, and obtaining informed consent from the patient. Altogether, this book will transform the way you treatment plan your cases.
